I graduated with a degree in Information Technology from Da Nang University of Architecture and have a solid foundation in Fullstack Web Development. I have experience working with Java Spring Boot) and Python FastAPI , combined with modern frameworks such as React and VueJS. I have completed practical internships at companies, participating in building large-scale management systems. My goal is to become a professional Fullstack Developer, contributing to high-quality software projects.

SKILLS

Language .Net, C, Java, Python, Javascript, Typescript
Framework ASP.Net, Spring Boot, ReactJs, VueJs
Database MySQL, PostgreSQL, MongoDB
Tools Version Control (Git), Docker
Communication English (Working proficiency), Vietnamese (Native Speaker)

EXPERIENCE

FullStack Developer Aug 2025 — Feb 2026
Techzen Company

Academy Management Project

- Participated in developing modules for managing students, courses, and schedules.
- Used Spring Boot to build APIs and VueJS for the user interface.
- Optimized database queries via PostgreSQL to increase page load speed.
- Managed source code using Git/GitHub, working with branches and pull requests.
- Deployed the system using Docker and containerization to the company's internal development server.
- Collaborated with the team using Agile/Scrum methodologies to develop and improve the system.

Main Financial Management Project

- Developed the backend using Python (FastAPI) to handle cash flow calculations and revenue reporting.
- Designed a live dashboard interface to help users accurately track financial changes over time.
- Designed API architecture to ensure scalability and maintainability.
- Worked with the database to optimize queries and ensure data accuracy.
- Executed inter-service transactions via RESTful APIs to build a microservices ecosystem.
- Collaborated with the team to operate the system in a staging environment, handle errors, and improve performance.

PROJECTS

Fullstack Developer / Website for table reservations and food ordering Aug 2025 — Dec 2025
Completed real-time table and menu ordering system, AI chatbot supports menu recommendations based on customer needs

- Design and develop RESTful APIs with Spring Boot
- Build frontend using Vue 3 + Pinia, manage state
- Design a standardized PostgreSQL database (3NF)
- Integrate AI Chatbot Google Gemini) for menu recommendations and table reservation support
- Implement Microservices architecture Backend + AI Service)
- Handle authentication using JWT, user authorization
- Containerize the system with Docker Compose

Fullstack Developer / Dormitory management software Oct 2024 — Jan 2025
A pet project that implement whole dormitory management system with clearly organized data and easy to scale

- Develop a dormitory management software to manage students, rooms, and expenses.
- Develop the application using C
- Design and implement the MySQL database
- Perform CRUD operations and efficient data queries

EDUCATION

Major: Information Technology, *Da Nang University of Architecture*

Sep 2022 — Jun 2026

ADDITIONAL INFORMATION

Finished Courses

- **Epic React:** [EpicReact](#)
- **Advanced Redux:** [Frontend Masters](#)
- **SQL And PostgreSQL:** [Udemy](#)
- **Redis:** [Udemy](#)
